REFERRED FOR: _____

REFERRING PROVIDER: _____

SENT BY (Person sending this form): _____

REFERRING PHONE NUMBER: _____

REFERRING FAX NUMBER: _____

Clinical Research Center of Alabama has been conducting clinical research studies since 1998. Our center has conducted hundreds of clinical trials in both adult and pediatric patients, and has contributed to the development of new therapies for asthma, allergic rhinitis, eczema, hives, hereditary angioedema (HAE), chronic obstructive pulmonary disease (COPD), and immune deficiency.

Our team of research coordinators and assistants are certified by the Association of Clinical Research Professionals, ensuring that our staff conforms to the highest ethical and clinical research standards. By participating in clinical research, your patients won't just be receiving cutting edge therapies before they are released to the public - you'll also be furthering research to help future patients suffering from the same disorders.

Our research coordinators will promptly contact your patient about the trial qualification process. If they qualify for one of our studies, study-related visits and medications will be provided at no cost, and they may be compensated for their time and travel. If you have any questions about our studies please call our research coordinators at 205-209-4100.
